

# Seedling Care Program

## AgVentures Full Circle Crop Care Plan

**Start your new seeding alfalfa off on the right track.**

**Seed: Legacy 447 @ 18#/ac treated with Mycorrhizae**

- Legacy 447
  - Versatile on all soil types
  - Great for aggressive 3,4,5 cut systems
  - Has great yield trial results in Wisconsin, Penn State, Ohio, Michigan
  - Extreme Milk per Acre and Milk per Ton results
- Mycorrhizae fungi is responsible for enhancing the plant root structure so it can absorb more water and nutrients. Mycorrhizae also protects the roots from pathogens like phytophthora and fusarium.

**Herbicide: Raptor-5oz/ac + surfactants**

Application Timing: 4<sup>th</sup> trifoliate

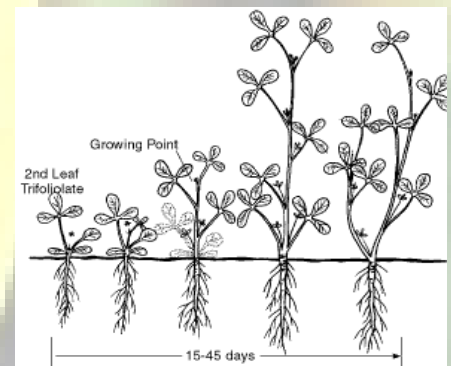

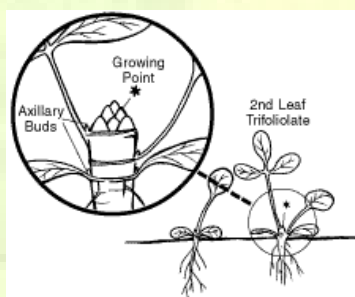

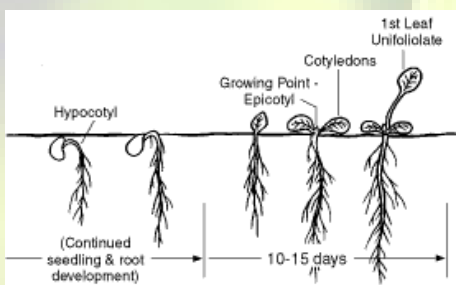

- Killing weeds while they are small helps to establish the best stand.

**Insecticide + Micronutrient Application:**

**Baythroid 2oz/ac + Equation 1.5qts/ac**

Application Timing: 6-12 inches

- Kill pesky yield reducing insects. (Imagine being constantly bit up by mosquitoes, that is how alfalfa plants feel after being bit by leafhoppers.)
- Feeding young seedling alfalfa plants a quality balanced nutrient package helps them to fight off diseases and grow more rapidly. 'Equation' is a well balanced macro and micro nutrient package for young alfalfa plants.

**Enviro-Pros field scouting program will monitor crop for optimum application timing.**

Make sure soil is at proper pH and nutrients levels before you plant.
